Durban ICC 82nd SASTA Congress – Towards Sustainable Development

The 82nd South African Sugar Technologist's Association (SASTA) annual congress took place at the Durban ICC between 26 and 28 August 2009. The conferences' theme this year was aimed at sustainable development.

Agaricus Trading held a joint exhibition stand with Talbot and Talbot (<http://www.talbot.co.za>), displaying the various anaerobic digestion and power creation options available to the sugar industry in Africa.

GE Jenbacher's gas engines are an ideal solution to creating electricity from Vinasse gas (digested anaerobically), which can be fed directly into the district's power grid, or used by the sugar plant as a contribution to their electricity demands. The recent REFIT tariffs make this option all the more viable in South Africa.

The heat from the engine's exhausts can be used to expedite the anaerobic process and it can also be used in the creation of the sugar plants hi and low pressure steam.

Display by Agaricus Trading and Talbot & Talbot at the SASTA congress event held at Durban's ICC.
