AGARICUS TRADING AND GE JENBACHER HOLD THE FIRST EVER OPERATORS AND CUSTOMER CONFERENCE

South Africa, Johannesburg, was the location for the first ever GE Jenbacher gas engine operator's and customer conference. Operators from around the country participated in the event held on 13th May.

Problems, solutions and operation related issues were discussed and ideas were shared. Operators had the opportunity to present their projects, focussing on experience and issues surrounding their GE Jenbacher gas engine daily operations. The Jenbacher 3, 4 and 6 series engines were all represented with gas types ranging from natural gas to furnace and other special gases.

An additional presentation was given on the benefits of a Clean Development Mechanism (CDM) project, running in conjunction with the environmentally friendly range of GE Jenbacher gas engines. Useful plant trending and proactive maintenance ideas were shared.

A presentation was made by GE outlining the benefits of the new GE South Africa Jenbacher Service Subsidiary and showing the different GE Jenbacher Contractual Service Agreements (CSAs) available to customers to ensure economical engine online time.

The day was concluded with a site visit to ABSA Towers West, where four Jenbacher 620s are currently being commissioned to run a cogeneration power project to supply electricity to meet their internal demands.
