EXPANDING SUSTAINABLE BIOENERGY PRODUCTION

Maputo, Mozambique: 11—13, May 2010

GreenPower Conferences organised this event which linked key players from Mozambique, Tanzania, Uganda, Kenya, Zambia, Malawi & Madagascar, with global industry experts. African observers saw new potential for the continent in the form of a bioenergy boom as large areas of the continent are proving fertile ground for alternatives to fossil fuels. Africa has the potential to become a major exporter of biofuels which has opened up considerable investment interest. This offers many opportunities for local economic development.

Sustainable bioenergy remains a key part of the global energy solution. East and Southern Africa represents a potential marketplace for Agaricus Trading (Pty) Ltd as the waste products from biofuel production may be processed to yield gas to fuel GE Jenbacher engines for combined heat and electrical power for these processes. The growing demand for biofuels has sparked a green revolution in Africa.

Sales Representative
GE Jenbacher gas engines

Directors:
GWP de Mattos
BN Bailey
R Lombard

Company Registration number 2009/016154/07

Ray Lombard (opposite) and David de Mattos represented Agaricus Trading (Pty) Ltd through their exhibit at this worthwhile conference.
