MTE – Secunda expo

Agaricus Trading took part in the MTE (Mining and Technical Exhibitions) expo held on 12 November 2009 at Secunda.

GE Jenbacher's gas engines are an ideal solution to creating electricity from coal bed and other coal mine gas. Coal mining releases methane gas from which power and heat can be generated. Methane is a leading contributor to greenhouse gas emissions into the atmosphere and GE Jenbacher engines are ideally suited to help dispose of coal mine gas, while harnessing its energy source at the same time.

Apart from heat and power generation, mine gas extraction and combustion creates an ideal opportunity to pursue Clean Development Mechanism (CDM) projects under the Kyoto Protocol. CDM projects reduce NET global greenhouse gas emissions by selling Emission Reductions (ERs) under the guidance of the United Nations Framework Convention on Climate Change (UNFCCC).
